I would be an exceptional fit for this position because I am well acquainted with hard work and problem solving. I have been in several positions of leadership, worked in customer service, and I am finishing my last year of college. In my work as a computer science tutor, I helped other people understand coding concepts, so teaching and mentoring is very important to me. I worked closely with a university professor to create a new assigned course project for one of the classes. I'm very familiar with coding concepts and love to learn and solve problems.
